Yotam:
- Database functionality
    - Created dummy users and saved to database.
    - Created dummy users with correct/incorrect data mixes and saved to database.
    - Created incomplete users and saved to database.
    - Registered new users through the application and checked the data load to the database.
    - Registered new users through the application, manually set data, and checked data load to database.
    - Retrieved data from the database.
    - Retrieved data from the database that was a mix of correct/incorrect types and values.
    - Edited values in database and then retrieved it.
    - Pushed dataloads to database that conflicted with current database values.
    - Pull/Push unverified instance and to disallowed tree partitions
        - Ensure proper R/W perm functionalities
- Login/Register back-end
    - Register new user, register old user
        - Check the dataload created
    - Login new user, login old user
        - Check dataload pulled from database or created

Scott:
User.java
- Created test file to ensure User.java functions work properly
    - Tested saving email, name, sex, DOB, height, weight
    - Made dummy users to see if the attributes can be changed
    - Made dummy workout lists and exercises to test editing of User.user_workouts
Routine
- Created dummy routines to see if information properly displayed onto view
- Used dummy routines to test if user was properly getting the information and saving them
- Consistent appearance using different resolutions

Rahul:
Login/Register front-end
- Showing/hiding password
- Testing auto resizing
- Consistent design with constraints across different resolutions

Profile Page
- Replacing profile pic, checking for save across logins
- Testing blank inputs for user profile

- Taking blank inputs for user maxes
- Leaving required and optional fields blank
- Testing back button based on existing profile attributes (back button functionality changes with profile completion)
- UI bugs
    - List not scrolling properly
    - Ensuring that the image was replaced in both front and back end

Workout Page
- Completing workouts halfway
- Resetting workouts midway
- Completing workouts out of order
- Attempting to change exercise maxes with no input
